

ALBERTO KNOT

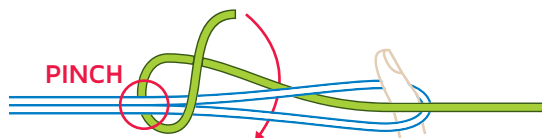

Used for joining fluorocarbon leader to braid.

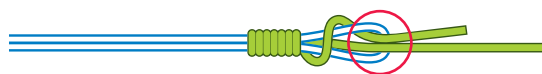

- 1** Make a loop in the leader & feed braid through.

- 2** Wrap braid behind leader & pinch, hold leader loop tight with your other pinky finger.

- 3** Wrap the braid around the leader 7 times with your other index finger and thumb.

- 4** Make sure the braid comes out the same side you started, otherwise it will cut the knot.

- 5** Hold both ends of the braid & leader, slowly pull the loops down to bind up, then pull tight & trim off tag ends.
